

ATDA Clinical Startup Guide:

How do I get started with teledentistry in my practice ASAP?

- Read your State Dental Practice Act to determine what is permitted with teledentistry. If unclear, contact the State Dental Board office or Dental Association office.
- Check with your malpractice insurance carrier to see if you are covered for any teledentistry or telehealth practice.
- Find a HIPAA compliant solution for either a store-and-forward method, synchronous method or both methods. There are many vendors in the marketplace and an internet search under teledentistry software will yield a good list. Rhinogram, LLC is a corporate partner of the ATDA and we use their platform for our website.
- Educate your office staff on creating a workflow for implementation.
- Let your current patients know that you have it.
